

North American Hydroponics
We Are Hydro

The standard for Medicinal Providers nationwide,
with scalable systems from 1 to 66 plants...

As seen on

Hobbyist-33

U.S. Patent 6247268, additional
U.S. and foreign patents pending

The World's Greatest Growing Machine
Easiest

...all systems come complete, fully assembled and ready to run, right out of the box

Growing made easy ... by design.

North American Hydroponics

We Are Hydro

Food-Grade design - PVC components extruded from a product class mix that meet the requirements of NSF/ANSI-61 for use in potable water systems, ensuring highest quality nutritional and medicinal products.

Self-cleaning and recirculation for mixing - the addition of a filter element to the recirculation line allows the system to self-clean while auto mixing under pump power. Complete mixing ensures accurate pH and TDS measurements.

PH-neutral, eliminates nutrient uptake problems - pH neutrality allows the plants to absorb nutrients without constant corrections due to pH bias.

Built-in modular reservoir - the self-contained modular reservoir automatically expands the reservoir volume as new GrowModules are added, maintaining the proper plant-to-reservoir ratio as the system grows.

PotLocks reduce external plant support requirements - these unique elements lock the plant baskets into the GrowTube, providing necessary mechanical support for top-heavy crops, while dramatically reducing the requirements for external support.

QuickConnect evacuation/fill port - this port allows for rapid emptying and refilling of the reservoir through the bi-directional port without changing the hose.

Double O-ring sealed leakproof/removable valve system - redundant O-rings means no leaks in the valve system, which is user removable without tools.

Lightproof/filtered design for clean operation - the lightproof/filtered design eliminates the sources of system contamination, resulting in a perfectly clean system.

Supports Drip, Flood, NFT, Aeroponic, Hybrid modes - the GrowMode baffle allows user configuration in most popular grow methodologies, including the default Hybrid mode which combines the best of all methods.

Built-in valve system dramatically reduces labor - the valve system assists the grower by utilizing the power of the pump for mixing, recirculation, filtering, system evacuation, and refilling...dramatically reducing operator effort.

Five minute assembly/disassembly without tools - easy, rapid assembly and disassembly without assistance and without tools...requiring no sealants to maintain a watertight system.

Capable of draining uphill to a higher elevation - by draining under pump power, the system can empty the contents to a higher elevation, allowing the unit to be placed in locations unavailable for growing in the past. No floor drain required.

All plumbing internal - totally self-contained and self-supporting, with industrial strength support and no external lines to leak.

Easy setup and cleaning - five minute assembly/disassembly without tools. All internal surfaces are easily accessible for cleaning.

Guaranteed 100% watertight without sealants - the unique assembly method allows easy assembly without tools, while maintaining system integrity with a watertight seal without the use of sealants.
